

# DAS-Flex™ Option

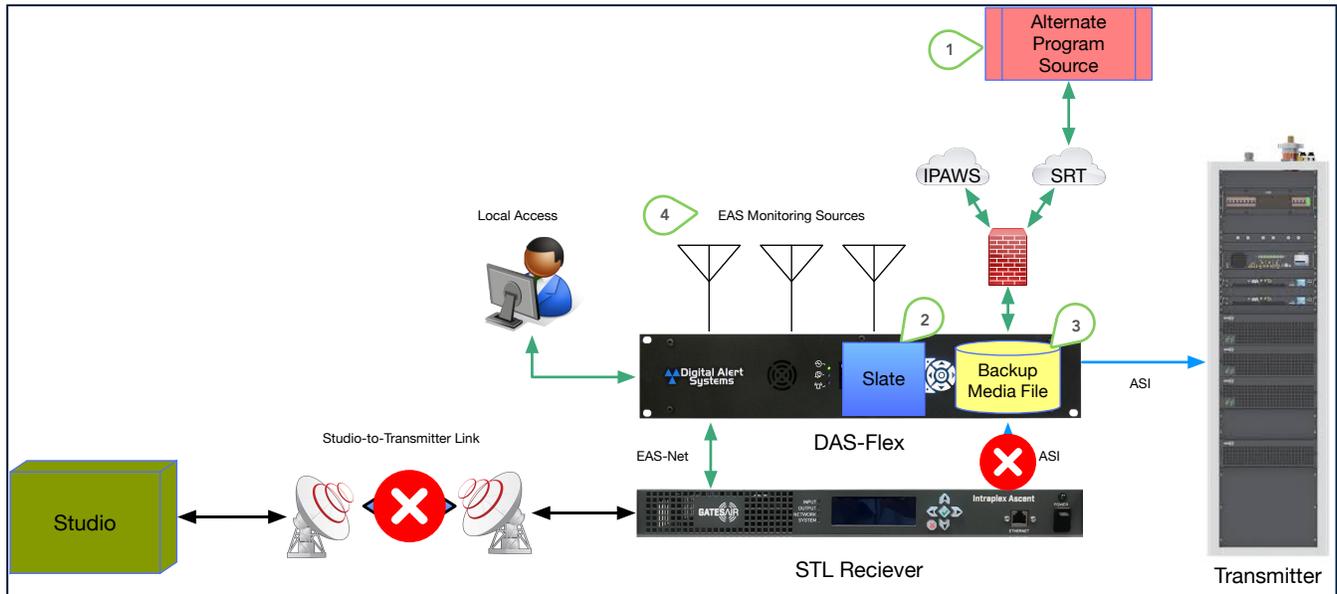

The DAS-Flex is a unique option for the DASDEC™-III emergency messaging platform - incorporating a D2D Flex series multiplexor and media keyer into a single device.

- Maximum broadcast continuity, alert effectiveness, and system survivability in any environment
- Multi-role functionality:
  - Primary EAS device, emergency message encoder, signal switcher, media playout device, and ASI-IP bridge — all in one unit.
  - Targeted EAS/CAP message insertion for translator sites
  - Simplified compliance for LPTV with both ASI and IP-based (SRT) feeds
- Eliminates dead air by seamlessly transitioning to backup content and alerting — keeping viewers informed and engaged
- Loss of studio-transmitter link (STL) automatically:
  - Switches to a secondary SRT feed, or
  - Displays a technical difficulties slate, or
  - Plays locally stored media
- Stations never go dark, even when primary infrastructure fails
- Fail-safe bypass on power lose
- Emergency alerting is always ready

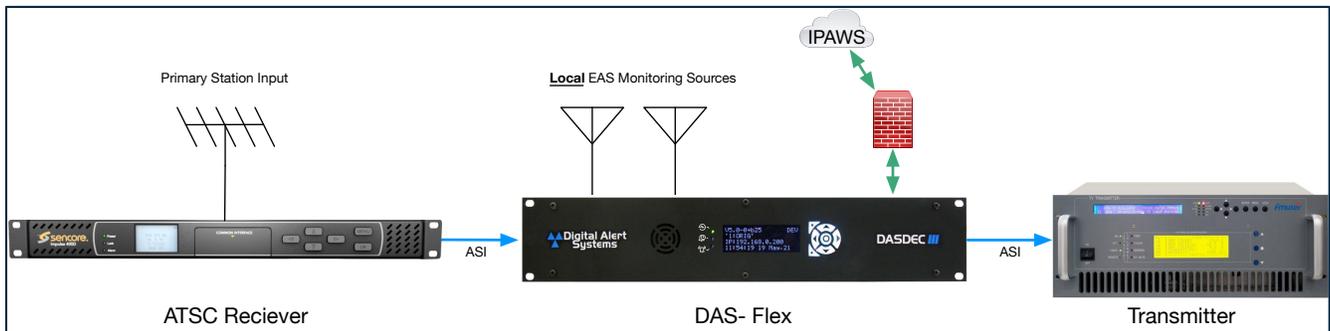

DAS-Flex — a robust, all-in-one solution designed for maximum broadcast continuity, alert effectiveness, and system survivability in any environment. Ensuring broadcasters are always on and alert.

# DAS-Flex Applications

## 1. Tower Backup Switch with Alerting

## 2. Local Alerts for Translator Sites

## 3. Low-Power TV Package
